INTRODUCTION

1. As a government department, there is an expectation on HSE (from both Parliament and the UK population) to treat its information with due care. This includes protecting information (whether personal data or sensitive material) and safeguarding material that enable HSE to demonstrate accountability and responsibility. This accountability to the citizen is what gives government departments their unique status within society, and it is the information we capture that is the main conduit for ensuring our responsibilities are effectively discharged.
2. The Public Records Act 1958 and 1967 (PRA), the Data Protection Act 2018 (DPA), the Freedom of Information Act 2000 (FOI Act) and the Re-use of Public Sector Information Regulations 2015 provide the legal framework for all civil service information activity. Together they place limitations and boundaries on what can be collected and held; what should be retained and released; what should be made available on request; and how material can be used and reused. Government departments and specifically their Accounting Officers are responsible before the law for compliance with each of these and the Lord Chancellor's Code of Practice on the management of records is currently the main route to guidance on how compliance can be achieved.
3. To meet our statutory responsibilities HSE is required to manage its information in a systematic way. This means the information we capture is stored, organised and structured in a consistent way, is secure, accessible to those who need it, and is destroyed when there is no longer a legal or operational reason for retaining it.

4. The Business Classification Scheme (BCS) and Disposal Policy is a critical component of HSE’s information management regime. Its purpose is to support compliance with legal obligations, and provides a roadmap for managing the lifecycle of information. It provides a corporately agreed policy that sets out HSE’s broad information categories, and the set period for which the information should be retained.
5. The BCS is an integral feature of our corporate information management systems. TRIM, COIN, and our paper records repository, all use the BCS as the basis for classifying, storing, accessing, and (eventually) disposing of information. However, this policy applies to **all** information captured or created by HSE, regardless of format, purpose, or storage mechanism.

HOW IT WORKS

6. The BCS provides a common and consistent framework for handling information across HSE. It is intended to support all areas of HSE’s business, including programme and project-based working. It is derived from a functional analysis of HSE which is an approach that has been adopted throughout the Civil Service and endorsed by The National Archives.
7. The BCS is organised into a three-level classification, which, for most areas has been organised as follows:
 - **Function** - used as a top-level term to represent the major responsibilities that are managed by the HSE to fulfil its goals.
 - **Activity** - used to describe the major tasks performed by the HSE to accomplish each of its functions. Several activities may be associated with each function.
 - **Process** - used to describe the tasks, which take place on a regular basis to perform each activity.

8. Some Examples are listed below:

Function		Activity		Process	
1	Business Support and Management	1.6.	Human Resource Management	1.6.4.	Recruitment
4	Regulatory Function	4.4	Permissioning	4.4.2	Safety Reports / Cases: Assessment
2	Policy and Legislation Development	2.3	EU Work	2.3.2	Legislation

DISPOSAL SCHEDULE

9. Each entry in the BCS includes a column containing the recommended disposal period for the category of information in question. This represents the point in the content’s lifecycle at which HSE requires the information to be destroyed.

10. If in exceptional circumstances information is required for longer than its disposal period, a Records Instrument (RI) will be required. An RI provides legal provision for the retention of information beyond its normal disposal point and requires a business case that sets out the justification for doing so. It is the Secretary of State who has the final approval on all such cases

11. The main drivers for disposal, and therefore the authority for the disposal periods defined in this document are:

- Statutory – where HSE has a legal duty defined by law to retain information for the period defined
- Litigation – Where information is retained for the purposes of defending HSE in the event of litigation being brought against it
- Approved disposal – pre-defined disposal periods prescribed by other bodies, e.g. The National Archives, the Cabinet Office, etc.
- Operational need – where the retention of information continues to provide a critical role to HSE’s operational activities
